This new and easy-to-use course helps learners to master essential content and skills in Agricultural Sciences.

The Economics of Agriculture Margaret Capstick,2019-08-06 First published in 1970. The aim of this book is to provide an introduction to the special problems of agriculture in modern economies. The author writes for students of economics who have already acquired the elements of economic theory; no attempt is made, therefore, to explain simple theoretical concepts, but instead these are used in the analysis of some of the main problems of agricultural adjustment. Emphasis is placed on the position of agriculture in the economies of western Europe and of the United States. Sufficient historical background is given to explain the present use of the factors of production in agriculture and the way in which this use and policies of agricultural support vary from one country to another. Agricultural support policies are discussed with reference to their effect on consumers, producers and on rural society.

Economics of Agricultural Development George W. Norton,Jeffrey Alwang,William A. Masters,2014-09-25 Economics of Agricultural Development examines the causes, severity, and effects of poverty, population growth, and malnutrition in developing countries. It discusses potential solutions to these problems, progress made in many countries in recent years, and the implications of globalization for agriculture, poverty, and the environment. Topics covered in the book include: • Means for utilizing agricultural surpluses to further overall economic development • The sustainability of the natural resource environment • Gender issues in relation to agriculture and resource use • The contribution of agricultural

technologies • The importance of agricultural and macroeconomic policies as related to development and trade, and the successes and failures of such policies • Actions to encourage more rapid agricultural and economic development The globalization of trade in goods, services, and capital has been fundamental to changes being experienced in the agricultural and rural sectors of developing countries. It has major implications for the fight against poverty and food insecurity and for environmental sustainability. Recently, agriculture has returned to a position of center stage in the development dialog as food price volatility has increased along with water scarcity, and concerns grow over the effects of climate change on food supply and food security. This new edition of the essential textbook in the field builds on the 2010 edition and reflects the following developments: • Growth in foreign demand for land and other natural resources • Significant progress in agricultural and economic development in some low-income countries while others are being left behind • Continued growth in demand for higher-valued farm products This book is essential reading for undergraduate students seeking to understand the economics of agricultural development and the world food system, including environmental and human consequences, international trade, and capital flows.

An Introduction to the Study of Agricultural Economics Henry Charles Taylor, 1905

Agricultural Production Economics David L. Debertin, 2002

The World of Agricultural Economics Carin Martiin, 2013-04-12 This textbook takes a truly international approach towards agricultural economics, uniting many different perspectives on the subject and providing insight into agriculture in general, and into how practical farming works in particular. The book is laced throughout with real world examples and other pedagogical features. Topics covered are wide-ranging and include: world food production and population the food chain and food safety non-foods derived from farming land and soil issues arable and animal production and management at farm level. *The World of Agricultural Economics: an introduction* is primarily an introductory textbook for students in agricultural economics, agronomy and adjacent fields. However, its accessible approach means that it is also suitable for readers without any previous knowledge in the field, who are seeking an introduction to agriculture.

The Fight for Food Harold E. Croxall, Lionel P. Smith, 2019-07-19 Originally published in 1984. Without technical jargon or a mass of confusing statistics, this book describes a wide range of factors influencing agricultural productivity including weather, soil biology and ecology, and human, social, economic and political factors. The ways in which these factors operate and interact with each other to produce the changing circumstances in which farmers take their decisions are discussed. These decisions are the crucial factors in every productivity problem and the authors suggest policy changes which could improve the chances of farmers making the best choices, not only for themselves but for the consumer and the community at large.

The Analysis of Response in Crop and Livestock Production John L. Dillon, Jamie G Anderson, 2012-12-02 The role of the

agricultural scientist is to manipulate crop and livestock response phenomena so that they serve society's needs better, enabling countries to obtain full benefit from their agricultural resources. By producing food more efficiently, resources can be made available for non-agricultural development and other needs beyond the essentials of food and fibre. This text provides an introductory outline of the analytical principles involved in appraising the efficiency of crop-fertilizer and livestock-feed response. It provides students of both agricultural science and economics with a simple but formal exposition of the why, how and wherefore of the principles of crop and livestock analysis, thereby helping to further co-operative effort among biological and economic researchers. The third edition has been updated and revised, with additions relating to the principles of modelling, the concept of economic duality as pertinent to response processes, the appraisal of aggregate response, and the economics of response research.
